

“Dactylcam is a great way to achieve clean motion aerial shots. It can squeeze in tight places RC helicopters cant fly, and at high speeds. We've set it up coming out of 5th story building windows in Alaska and in the woods, deep in the back-country of Jackson. It's extremely versatile” - Teton Gravity Research

Reflex Motion Control (Johannesburg/Cape Town), in collaboration with **dactylcam** (Denver CO) now brings the Dactyl Cam **Guerilla** to South Africa.

The unique features of the **Guerilla** cable camera system:

- ...easy to transport
- ...quick to set-up
- ...cable lengths of up to 1000 ft (300 m)
- ...speeds up to 40 mph (60km/h)
- ...camera weight up to 13 lbs (6 kg)

The **dactylcam Guerilla** is a cost effective production tool. Contact us for further details and rate card.
